DETAILED ACTION

1. The examiner acknowledges that claims 9-11 have been cancelled and new claims 17 has been added. Claims 12-17 are pending. Applicant's arguments have been fully and carefully considered. Applicant's amendments have rendered the anticipatory rejection over Rossin and EP 1027918 moot. Upon updating the search a new reference was found which can be used against applicant's claims. Action on the merits of claims 12-17 follows:

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 12-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imamura.[USP 6,126,906]

Imamura teaches the invention substantially as claimed. Imamura teaches an apparatus which removes perfluorocompounds decomposing apparatus, an acid gas removing device. Specifically, an apparatus which decomposes PFC compounds by first

Art Unit: 1764

washing the gas in a first water scrubber followed by providing a gas decomposing tower downstream of the first water scrubber and a second water scrubber which is downstream of the gas decomposition tower and a burner which is downstream of the second water scrubber. The decomposition tower (element 2) thermally decomposes a mixture of perfluorocompound containing gas at a temperature of 600oC or more. The perfluorocompounds containing gas is thermally decomposed in the decomposer tower which is electrically heated, the gas is then exhausted or suctioned from the tower and passed to the second scrubber where the fluorocompound is then dissolved into the water or can be introduced into an absorber tower.[Note Column 7, Example 7 and Column 5, lines 9-61] Imamura teaches providing a water tank or water cistern (10) which is located below the decomposer on which the first and second scrubbers stand has been fully taught which feed water into the scrubbers.[See the Figure 1]

However, Imamura does not specifically teach the mist separating apparatus.

Imamura teaches the invention substantially as claimed for reasons delineated above, Imamura teaches using two scrubbers on which treats the gas before the perfluorocompounds are decomposed and then after decomposition the decomposed gas is then scrubbed in a second scrubber and/or can be further treated in an absorber before the gas is vented to the atmosphere. To include a mist separating device such as described by applicant where separatory devices have been taught for the purpose of removing harmful components from a gas prior to venting the gas to the atmosphere would have been obvious to one having ordinary skill in the art at the time the invention was made.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
